ON-LINE Masters of Engineering in Geotechnics:

The upward mobility of professionals in the geotechnical field requires advanced degrees, but not all are willing or able to take an extended leave of absence to attend a university. Web-based education allows students to continue working at their jobs, while taking virtual classes at their convenience. The program benefits employers in that their employees will be able to upgrade their education while continuing to perform their job duties.

Our Mission:

Missouri University of Science and Technology (Missouri S&T) is one of the top geotechnology schools in the country.

Geotechnical Engineering is one of the Missions of Missouri S&T, and has been recognized by receiving Mission Enhancement Funding from the State of Missouri for this purpose.

You can now take advantage of this unique opportunity to earn a web-based Masters of Engineering degree in Geotechnics.

For more information, on how you can take advantage of this opportunity, please see our website at:
